www.QueueSolutions.com

CrowdPro is a lightweight yet strong plastic barricade ideal for use as either a traffic or pedestrian barrier. The 6.5' length of CrowdPro is designed for the fast set up of long run barriers but with a weight of only 15 lbs is easy to handle. The units connect using a heavy-duty locking pin which will keep them locked together in any crowd or weather conditions. The connection design also allows the barricades to pivot up to 90 degrees so they can act as a gate. The CrowdPro's feet are securely attached to the frame but rotate so they can stack flat for high density storage and transport. There are spaces at the top of the frame to attach adhesive reflective strips.

Reflective Strip Option
