

The CrowdMaster ADA barricade features a unique design of feet. Manufactured from a solid bar of 3/16" thick steel, these feet add extra weight to the base of the barricade increasing its stability for use in large crowds. The very low profile of the feet minimizes trip hazard and makes this model ADA (Americans with Disabilities Act) compliant.

The barricade frame is manufactured from heavy duty 16 gauge steel and features uprights which are fully inserted into the frame before welding, proving extraordinary strength. The barricades interlock using the industry standard hook and loop system fastening system so you can create a crowd barrier of any length.

Model: BAR6-AF

Model: BAR8-AF
